receptors

The devices contain a component that has been infused with a subtle energy pattern by physicists. They induce a neurological response from the **Central Nervous System (CNS)** which greatly improves muscle and joint function.

- All joints, muscles and tendons have nerve fibres embedded within them that communicate with our CNS. Our ability to perform well is determined by the integrity of these connections.
- When a device is worn on the midline of the body, and one on the outside of each ankle, a triangular energy field intersects with the CNS. This phenomenon is known as **Quantum Entanglement**. Additionally, a fourth device adhered to the putter head, connects the putter head to the CNS during the putting stroke.
- Wearing the devices eliminates the weaknesses and results in the correct use of the muscles involved in swing bio-mechanics.

Neuro Connect™ Golf is an entirely new and original scientific discovery that will revolutionize your game.

This is a Sport Enhancement Technology that optimizes muscle and joint function during your golf swing improving accuracy and performance.

Many people have compromised joint function, commonly at the base of the spine and the sacroiliac joints. As soon as weight is transferred to these restricted joints during the swing, the muscles which should be supporting the joint, stop functioning correctly. The golfer automatically compensates for this by recruiting other muscles, thereby changing the mechanics of the swing.

The specific muscles used during the golf swing were tested on many individuals and almost every person was found to have hidden weaknesses which manifested in either the back swing or the follow-through.

Neuro Connect™ devices cause the nervous system to override this dysfunction. The devices enhance the body's ability to use the correct muscles, even when spinal joints are not performing optimally.

Neuro Connect™ Golf devices ensure the correct response from the core and the other muscles involved in the mechanics of the swing.

Neuro Connect™ Golf devices improve golf swing rhythm and balance, and restore spine and pelvic function while walking.

The subtle energy field from the devices intersects the Central Nervous System to optimize muscle and joint function, as well as connecting the CNS to the club head for improved putter head feel and control.

TESTIMONIALS

It has been 2 years since I walked 18 holes due to a sciatic problem in my left IT band. Wearing **Neuro Connect™** I am able to walk the course again! Right from the first round I have been putting better than ever before. More comfortable, feeling that the control and consistency is there. Especially effective on the knee-knocker putts! Playing consistently well since wearing **Neuro Connect™**.

Walking the dog.....long walks tend to cause some discomfort from a previous leg injury - sciatic and IT band area. From the first walk with the **Neuro Connect™** clips the discomfort is minimized or gone all together.

Claudio D The Travelling Golfer.com

What a wonderful product for the golf industry! Not only does **Neuro Connect™** increase balance and

The technology was developed by a Chiropractor and a team of physio-cists. Dr. Mark Metus was looking for a way for his patients to maintain their chiropractic adjustments. Many people require ongoing maintenance treatments due to lifestyle and degenerative changes in their spines. The patients wearing the devices required less treatment and their overall spinal function improved significantly.

therefore result in longer and better shots, most importantly for me, the system reduces pain.

As a 72 year-old golf pro that suffers from Ankylosing Spondylitis which has resulted in spinal fusion, the **Neuro Connect™** devices have been a Godsend. I have tested the system throughout all of the 2016 season with astonishing results. The ball flies further because of increased mobility and balance, and what a pleasure it is to golf pain free.

We all know the golf population is aging. Older golfers don't have the flexibility they once had, but with the **Neuro Connect™** system my flexibility has increased due to less muscle tension. Even my putting has improved! When the fourth device was attached to my putter for the first time, instantly I started to release the putter head better. Nothing like a couple of long ones during a round! Can an energy field help improve your game? Try it and you will instantly feel and see the difference.

Bill Patterson C.G.T.F. Professional

There was no doubt my golf swing muscles were extremely weak when tested, but they strengthened immediately when I wore the devices. It makes sense to me that practising and playing with muscles that perform properly is going to benefit every golfer. What I noticed the most is that I have been putting 'lights out'.
